Industrial and Organizational (I/O) psychologists contribute to an organization's success by improving the performance and well-being of its people. An I/O psychologist researches and identifies business strategies that can help individuals have more satisfying work through hiring practices, training programs, and feedback systems. Applying psychology to help individuals have more satisfying work is a fulfilling vocation. Some of the business strategies that I/O psychologists assist with include:

- Recruit, hire, and retain the most qualified employees
- Develop fair, legal, and efficient hiring practices
- Design and implement new training programs
- Increase diversity in the workforce
- Develop performance management systems
- Minimize absenteeism
- Eliminate harassment and discrimination
- Increase motivation and enhance work-life balance

The Society for Industrial and Organizational Psychology is also an excellent source of information regarding I/O Psychology programs and general information related to the field: www.siop.org

If you are interested in applying to the I/O Psychology program at East Carolina University, please contact:

Dr. Shahnaz Aziz

E-mail: azizs@ecu.edu

More information about the application process can be found on the Department of Psychology website: https://psychology.ecu.edu

Interested in I/O?

Admission to the I/O program is contingent upon meeting all requirements of the ECU Graduate School and being recommended by a committee of the Department of Psychology. Application materials can be downloaded online at https://psychology.ecu.edu/graduate/applications. Note that the Department of Psychology Supplemental Application is a required portion of your application.

A combination of GRE scores, grade point average, references, and other supplemental materials is used in making recommendations for admission.

All application materials should be submitted by March 1st. Students will begin their graduate work in the fall semester.

What is I/O Psychology?

Students enrolled in the I/O Psychology program at ECU will complete a total of 45 semester hours of coursework. Students may choose to complete either an internship or a thesis, however, we encourage students to consider doing both. Information about the program can be found on the Find Your Program page: https://gradschool.ecu.edu/find-your-program/?id=31

Internship and Thesis

Students may choose to complete an internship or a thesis or both. NOTE: While the internship is not required, it is highly encouraged and most of our students choose to complete one.

Internship

- Internships provide students with an opportunity to apply skills learned through coursework and to acquire new skills in an organizational setting.
- Placements occur during the summer following the first year of coursework.
- Typically, interns are placed on the organization’s payroll.
- Relocation is sometimes necessary for the summer internship.

Thesis

- The master’s thesis is a professional research paper and an example of the student’s research skills and ability to write an organized report. The student will defend the completed thesis at an oral examination conducted by members of the thesis committee.
- The student will usually find it advantageous to select a topical area in which a faculty member in the program has substantial research expertise.

Application and Admission

Students may choose to complete either an internship or a thesis, however, we encourage students to consider doing both. Information about the program can be found on the Find Your Program page: https://gradschool.ecu.edu/find-your-program/?id=31

Financial Support

- Research or teaching assistantships are generally available for current students. A letter accompanying the application materials indicating the desire and basis for needing financial assistance is considered an application for an assistantship.
- Most full-time graduate students have been awarded research and/or teaching assistantships for at least part of their time in the program. Besides providing financial assistance, assistantships also offer the opportunity for students to improve their interpersonal and research skills.
