

Consumer Information Disclosures:

Does the Health Psychology PhD (Clinical Health & Pediatric School concentrations) at ECU meet educational requirements for licensure in different states within the USA?

The *Clinical Health concentration* of the Health Psychology PhD program is APA-accredited as a Clinical Psychology program, and the *Pediatric School concentration* of the Health Psychology PhD program is APA-accredited as a School Psychology program. Most state licensure boards accept **APA-accredited programs** as meeting their core **educational requirements*** for licensure. To the best of our knowledge, and at last check (10/01/2024), only the following states do not automatically accept APA-accreditation: CA, NY, OK, WV, and WI. In reviewing the specifics of these states, we determined that we meet educational requirements for OK and WI, and do not meet educational requirements for CA and NY. WV may have a psychology license restricted to clinical or counseling psychology only (unclear if a PHD in school psychology is accepted). However, the *Clinical Health concentration* would meet educational requirements in WV.

***NOTE: Education requirements are only part of a state's licensure requirements. Every state differs in requirements for hours of predoctoral and postdoctoral supervised practice, written and/or oral examinations, specific one-time trainings, criminal background checks, etc. Please check with specific state boards to learn their full requirements for licensure.**

Specific educational requirements for CA and NY follow:

California accepts accredited programs like ECU's APA-accredited program for core educational requirements; but California also requires **additional specific coursework or continuing education training prior to licensure**. Students wishing to become licensed in California are advised to work with their ECU program coordinator to tailor their electives to meet these additional training requirements to the extent possible.

New York accepts doctoral degrees for programs that are accredited by the American Psychological Association as a program in health service psychology, but they also require **coursework in Child Abuse Identification**. Students wishing to become licensed in New York are advised to work with their ECU program coordinator to tailor their electives to meet this additional training requirement to the extent possible.
